

# Voyager Digital Nautical Publications

The exact set of digital nautical publications each of your vessels needs - all in one incredibly easy eBook reader.

**Drive down costs** GNS data shows that most shipping companies overspend significantly on technical library publications. Voyager NAUTICAL PUBLICATIONS as a SERVICE enables you to eradicate this overspend and reduce costs whilst improving safety and compliance.

**Data-led compliance** GNS data analytics identify exactly the publications each vessel needs and delivers them to your vessels in one simple digital package.

**Everything vessels need in one place** One easy to use eBook reader provides access to the most comprehensive set of nautical publications - making it easier and more efficient for crews to find the information they need.

**Flag State regulations** Search and view current regulations and ensure vessels have up to date access to Notices, circulars and bulletins.

**Full range of Nautical Publications** from the world's leading publishers including IMO, Intercargo, OCIMF, SIGGTO and Witherby.

Enhance your shipping operations  
with data-led navigation

## A more cost-effective way to buy Nautical Publications

Voyager NAUTICAL PUBLICATIONS as a SERVICE is a new, more cost-efficient way to buy the nautical publications your vessels need. It uses GNS's unique data analytics capabilities to identify exactly the nautical publications each vessel in a fleet needs based on its Flag, Class and Trading areas. This precision purchasing approach means you only ever pay for what each vessel needs - eliminating overspending and wastage whilst enhancing fleet safety and compliance.

### Very simple and easy to manage

Voyager NAUTICAL PUBLICATIONS as a SERVICE provides all the publications each vessel needs via one eBook reader for extremely easy on board management and use.

### Your questions answered

#### How does GNS work out what each vessel needs to carry?

GNS has a unique maritime database that both tracks every vessel in the world and monitors exact navigational requirements. This enables us to create very precise technical libraries for vessels based on a range of criteria including Flag, Class and Trading areas.

#### How are publications kept up to date?

Updates from the publishers are automatically provided to vessels. New Editions are supplied as and when they are released.

#### I have my own technical library list - how does that work?

GNS will create a specific list for your fleet based on your specific requirements and manage New Editions against that list.

#### Is everything included?

Yes, all the nautical publications the vessel needs for safe and compliant navigation. All publications included in the list below are in the eBook reader. ITU publications

are provided in paper format with a separate CD-ROM and Admiralty publications are provided as eNPs as per publishers requirements.

#### What about the publications vessels need in paper format?

International Code of Signals and IAMSAR III are provided in paper format rather than as eBook for compliance purposes. Digital versions can also be supplied if required.

#### Is it an annual subscription?

No, publications are purchased as a one-off and replaced only when a New Edition is published. As many publications are only reissued every 5+ years, this makes it a very cost-efficient way to buy digital publications particularly when compared to some other digital publications services which charge a fixed annual subscription for content.

It also makes it much more cost-effective to switch from paper to digital as digital versions can be bought gradually as New Editions are published rather than in all in one go.

### Nautical Publications as a Service provides:

eBook Content:		Other Content:
